I write React and TypeScript, and when the browser isn't enough, I build the backend myself in C#/.NET. I specialize in canvas editors on @xyflow/react, design systems and the performance of heavy interfaces. Looking for a team working on editors, graphs or internal tools.

EXPERIENCE

PIX Robotics · Middle Full Stack Developer 2024 - now

- Own the process map canvas editor module (@xyflow/react) and the company design system
- Reworked edge attachment: a 1000-element map opens in 1.7 s instead of crashing the tab, with 2.5-3x less memory
- New canvas architecture: commands with rollback and undo/redo on top of Event Sourcing, change listeners, a MapInstance facade
- Started e2e testing from scratch: Playwright and Page Objects architecture, about 200 scenarios
- Design system of 3 npm packages: a UI library on Ant Design 5, 740+ icons from Figma, tokens. Used by 3 of 4 products
- Moved map export to the server in headless Chromium (PuppeteerSharp), built the frontend of the product's AI assistant

PIX Robotics · Junior Full Stack Developer 2023 - 2024

- Event log loading via COPY BINARY in PostgreSQL instead of EF Core: 10M rows in about a minute

Military service 2022 - 2023

VirtuumLab · Software Engineer 2021 - 2022

- Rewrote the FudKit POS module from Angular to React and connected it to an Atol fiscal printer via a local C# daemon
- Localized the whole product into 4 languages with .resx dictionaries
- A CRM and website for a client in Italy with one colleague, mostly on the backend

HACKATHONS

KosmoHackathon St. Petersburg, 1st place · Roscosmos and MIREA, 2026. Supply strategy for an orbital depot with an event-driven plan check

ROBOZON by Ozon Tech, 2nd place · 2026, about 1,000 teams in the track. Our own sorting center simulation engine, I did the frontend and 3D

STACK

Frontend	React, TypeScript, Redux Toolkit, @xyflow/react, Ant Design 5, SCSS / CSS Modules, Storybook, Playwright, three.js, Vite, Webpack
Backend	C#, ASP.NET Core, EF Core, PostgreSQL, SignalR, Hangfire, PuppeteerSharp, REST, Swagger
Infrastructure and practices	Docker, GitLab CI/CD, npm packages, CQRS, Event Sourcing, BPMN, Code Review

EDUCATION

MTI, Applied Informatics · Online, studying alongside work 2025 - 2028

Kolomna College · Information Systems and Programming 2018 - 2022

Artificial Intelligence in Flying Robotics · 216-hour course, College of Physics and Technology 2021
